**Lane Keeping Assist System (LKAS)**

Provides steering input to help keep the vehicle in the middle of a detected lane and visual and tactile alerts if the vehicle is detected drifting out of its lane while driving between 45–90 mph (72–145 km/h).

If your vehicle begins to drift away from the center of a detected lane without a turn signal activated, steering torque is applied to help keep your vehicle centered within the lane.

If your vehicle continues to drift and gets too close to detected left or right side lane markings, a Lane Departure message appears on the MID and the steering wheel vibrates. In either case, take appropriate action to stay within your driving lane.

**Turning LKAS On or Off**

1. Press MAIN. LKAS appears in the MID.

2. Press the LKAS button. Lane outlines appear in the MID. Dotted lane lines turn solid when the system operates.

3. Press MAIN or the LKAS button to turn the system off.

**Important Safety Reminder**

LKAS is for your convenience only. It is not a substitute for your vehicle control. The system does not work if you take your hands off the steering wheel or fail to steer the vehicle.

Do not place an object on the top of the instrument panel. It may reflect onto the windshield and prevent the system from detecting lane lines properly.

Do not use when towing.
